

SAMPLE TRACKED EVENT CRITERIA

| | Case Type |
|---------------|---|
| Tracked Event | Any case where harm has the potential to be NCC-MERP level F or above |
| | All NCC-MERP level E events with temporary but "significant" physical harm (called E+), with "significant" defined as harm whose management is anticipated to require an invasive medical procedure or three or more additional visits to a health care center. |
| | Any event that may need reporting to BORM or DPH |
| | Any event reported by a provider where CARE program is requested |
| | Any case reported by a patient claiming a harm event that is NCC-MERP level E+ or above |
| | Any case initiated by a pre-litigation notice |

A tracked event is an event that will need closer inspection with a CARE lens. Not all of the cases that meet the criteria above will become CARE Insurer Cases, but these are the categories of cases that are found to require the most attention from the CARE program; particularly with communication.
